

**PROPOSAL FOR ELECTIVE DIDACTIC ACTIVITIES (ADE)
A.A. 2020-2021**

TITLE ADE	Atherosclerosis: from lipid deposition to plaque rupture				
PROF./ DR.	Prof. Giovanni Cimmino				
SCIENTIFIC DISCIPLINARY SECTOR (SSD)	MED 11				
GENERAL AND SPECIFIC OBJECTIVES (MAX 500 CHARACTERS)	Atherosclerotic cardiovascular disease results in millions of sudden deaths annually, and coronary artery disease accounts for the majority of this toll. Despite major advances in the treatment of coronary artery disease, a large number of victims of the disease who are apparently healthy die suddenly without prior symptoms. All types of atherosclerotic plaques with high likelihood of thrombotic complications and rapid progression should be considered as vulnerable plaques.
